

SURGE INU

SURGEPAPER

WHY SURGE INU?

2021 was unprecedented for crypto. The historic bull run brought millions of new investors and billions of dollars. With this new wave of investment, thousands of new projects began popping up. Some of these, like SHIB, were an immense success and made overnight millionaires, but the large majority failed, were abandoned or were planned scams from the start.

There are now three things that memetoken investors are looking for:

- A way to differentiate good projects from bad projects.
- A way to present good projects and their strengths to the public, so other investors can come.
- Utility for the token, so they can earn a return.

Surge Inu is going to solve all three of these problems.

We want to establish an ecosystem of utilities that benefit the holders. One of them is an NFT game, and another is establishing an IDO platform.

Unlike other IDO platforms, the Surge Inu team has one of the strongest inbuilt marketing platforms available. The team has the strongest crypto marketing background of any IDO and the best marketing assets for promoting dog tokens. Featured projects will get influencer backing from big crypto Youtube channels and other social media platforms. This marketing advantage gives Surge Inu the power to choose only the best crypto projects to put onto its platform, which is something most IDO launchpads lack.

We're then building an interconnected DEFI ecosystems, so these projects can be easily monetized.

VALUES

The most important ingredient for any developing crypto, especially memetoken, is trust. The first way we're establishing trust is having a fully doxed project leader, that shows his face to thousands of people every day.

But we realize this might not be enough for everyone - that's why we're building trust on three core value pillars:

- Community
- Transparency
- Longevity

The best way to earn someone's trust is to interact with them personally. The longer and more intimately you know them, the more you trust them (that's why we trust our families above everyone else).

We're going to include our community every step of the way and be transparent about all our plans and even our failures. The longer we keep this up, the more trust we will build and the higher the value we bring. So jump in, ask us a question and let's establish a relationship!

TOKENOMICS

We're minting 999 trillion tokens and burning 549 trillion right away.

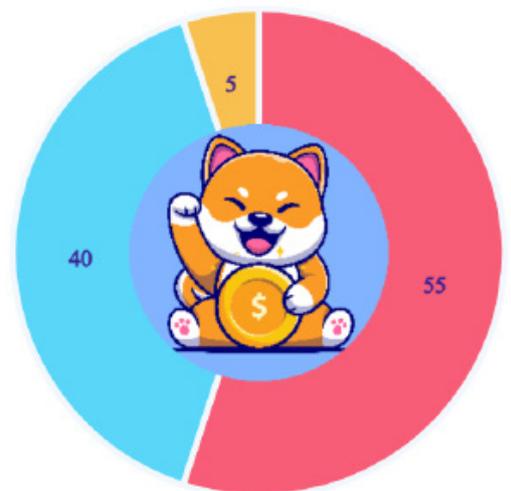

In line with our values, we're going to reward everyone for simply participating in Surge Inu. 6% of every transaction is spread across the wallets of all users. This means that if you simply buy and hold SURGE, you're getting passively rewarded with every transaction. The longer you've been a community member holding SURGE, the more transactions you benefit from.

Since we **burned 55% of the token at the start**, a part of these reflections also goes into our burn wallet, making the token naturally deflationary and increasing the price with every transaction.

3% of every transaction goes into the marketing wallet and will be either used for development of the project or burned in burn events.

Token distribution below:

-  55 % burned at start
-  40 % for investors
-  5 % team wallet & marketing

See the Surge Inu contract [here](#).

LIQUIDITY

We're [locking liquidity for two years](#), so there is no possibility of a rug pull or pump and dump.
